電動車充電站之充電管理方法及系統

(57)摘要

一種電動車充電站之充電管理方法及系統，適用於包括複數電動車充電站之一充電場域與透過一第一網路連接至每一電動車充電站之一伺服器。首先，伺服器執行一能源管理方案以對於充電場域中之電動車充電站執行一負載管理作業，其中能源管理方案記錄一配電邏輯，用以控制電動車充電站中之每一者所相應之一充電作業。當負載管理作業執行時，伺服器取得電動車充電站中之一第一特定電動車充電站之一第一裝置資料，並依據相應第一特定電動車充電站之第一裝置資料決定第一特定電動車充電站相應負載管理作業之一第一參考值，其中第一參考值係可變動的。伺服器透過網路持續接收相應第一特定電動車充電站之一第一充電作業之一第一充電資料並依據第一充電資料與第一參考值判斷是否發生一特定事件。當特定事件發生時，伺服器停止對第一特定電動車充電站執行負載管理作業。

Charging management methods and systems for electric vehicle charging stations for use in a charging field that includes multiple electric vehicle charging stations and a server connected to each electric vehicle charging station via a network are provided. First, the server executes an energy management scheme to perform load management operations on the electric vehicle charging stations in the charging field, wherein the energy management scheme records a distribution logic to control the charging operation of each electric vehicle charging station. When the load management operation is being performed, the server obtains first device data from a first specific electric vehicle charging station and determines a first reference value for the load management operation of the first specific electric vehicle charging station based on the first device data, wherein the first reference value is adjustable. The server continuously receives first charging data corresponding to a first charging operation from the first specific electric vehicle charging station via the network and determines whether a specific event has occurred based on the first charging data and the first reference value. If the specific event occurs, the server stops performing the load management operation on the first specific electric vehicle charging station.
